

Our energies for a Better Life

Design & build solutions

Modern market-drivers require a new blend of cost, quality, time and responsiveness, all delivered simultaneously to ensure sustainable competitive advantages and being first to market. Our in-house design and build teams deliver accelerated and fast-track multidisciplinary project solutions with single point accountability, coupled with the support of our off-site modular prefabrication facilities, we guarantee to get your products to market smarter and faster.

Working in alliance partnership with some of the world's leading blue chip customers we continually redefine best value and resilience levels, with a mindset of reducing project risks whilst delivering facilities of the highest aesthetic appeal, keeping you several steps ahead of your competitors at all times.

Based on a platform of technical **excellence and innovation**, our design and build solutions yield the highest returns on investment based on optimised capital and sustainable lifecycle solutions, dovetailing a wealth of cross-industry knowledge to ensure your facilities, assets and services incorporate the best available technologies and systems.

Our Expert Lifecycle Skills & Solutions:

- Architectural & 3D Visualisation Civils & Fit-Out
- Process Engineering
- Mechanical Engineering
- HVAC & Building Services
- Electrical Engineering
- Control & Instrumentation
- Modular Prefabrication
- Energy Optimisation

As an expert in certified projects whether in the [regulatory environment \[1\]](#) for human products, statutory top tier COMAH environments for speciality chemicals, BREAAAM/LEED for data centres and sustainable developments, we have decades of achieving compliance first time, every time.
