

Our energies for a Better Life

Transport Infrastructure

We deliver technically-advanced infrastructure systems including communications, CCTV and lighting - with experience in capital projects on motorway, major trunk road networks and for the rail sector.

Our project management and civil engineering experience includes major infrastructure projects such as the lighting and communications & CCTV elements of the [M25 widening scheme](#) [1] and M1 improvements. In the rail sector we delivered CCTV and electrical infrastructure for [New Cross Gate](#) [2] Depot. These projects demonstrate how we deliver value through an integrated and technical approach.

Our services include:

- **Telecommunications infrastructure** - complete turnkey projects from network installation to

-
- **CCTV** – we have the expertise, and track record, to fully design, build and maintain CCTV systems for a range of locations including the UK highway network.
 - **Highway lighting** - we cover all highway lighting projects, installation and maintenance, specialising in the larger capital schemes on motorways and trunk roads whether working for the Highways Agency, TfL or commissioning, testing, cabling, jointing and splicing of conventional, multi-core and fibre optic systems.

in partnership with their main contractor partners.
