

Our energies for a Better Life

## Environment

Bouygues Energies & Services recognises that our activities and services provided have the potential to impact on the environment. Therefore we are fully committed to minimising these any such through a formal approach.

Bouygues Energies & Services is triple certificated to ISO9001, ISO14001 and OHSAS18001 and the environmental management standard ISO 14001 is fully integrated into our everyday activities.

By way of certification, development of a set of robust policies and 'live' environmental improvement plans at all levels within the business we are able to deliver the **aspirations of the business** and **our clients**.

We have 'live' key targeted areas that we as a business focus on and commit to within the **improvement planning process**. By saving energy and reducing waste the business continues to maintain a positive impact on climate change.

As the business has matured in this area we have also managed to streamline processes to increase efficiency and business output, saving money as well.

Our **dynamic approach** has resulted in the business also becoming certificated to the Energy Management Standard ISO50001 (our FM business becoming the first in the UK to achieve this standard).

---

We are currently focusing on a 3 year environmental strategic plan that will target reducing our **carbon impact, minimising waste** and **diverting waste** from landfill and reducing energy as are our primary environmental issues.

The business has developed a set of key performance indicators to measure our success and these are reviewed and reported upon monthly at senior management and Board levels and form an integral part of our overall Business Improvement Plans (BIP's).

The Bouygues Construction Group are fully committed to a **Sustainable Development approach** throughout all its entities. It has provided a platform to drive an area of this commitment by developing its Actitudes program. There are other internal initiatives that support and deliver change and performance improvements:

#### **Internal initiatives:**

- Actitudes
- Ecosite

## **Actitudes**

(Bouygues Construction label and award system)

Actitudes is an initiative to coordinate the **sustainable development of Bouygues Energies &**

by sharing **best practice** across all our projects and companies, reporting on the **social** and **environmental impact of our projects** through seven aims and 42 actions. The aims are to: **Foster a trusting relationship** with our clients, based on consideration, transparency and innovation

- Incorporate risk in the day-to-day management of the company
- Lead our business sectors in terms of occupational health and safety
- Develop our employees' skills and promote equal opportunity
- Establish balanced, long-term relationships with partners, suppliers and subcontractors
- Ensure that our businesses respect the environment
- Participate in the economic and social life of the regions in which we operate

## **Ecosite**

An internal award system that establishes a formal approach and set of guides to deliver a **focused** and **consistent high level of environment management**.

- 
- Project's environmental risk
  - Waste
  - Hazardous products
  - Noise nuisances
  - Air
  - Aquatic environment
  - Biodiversity
  - Energy consumption
  - Cleanliness and storage
  - Communication
  - Emergency situations
